13. SUPPLEMENTARY NOTES					
14. ABSTRACT The US EPA is in the process of updating the toxicity information in its IRIS that is greater than 10 years old. The IRIS toxicity values are elements of the risk assessments used to establish exposure limits and cleanup standards at hazardous waste sites. Thus, revisions to these values can have implications for the DoD both in terms of guidance for monitoring human health and occupational exposures as well as the cost of cleanup at ERP sites. To estimate the potential DoD interest in the IRIS chemicals due for updates, the occurrence of these chemicals and their occurrence at ERP sites at concentrations greater than the EPA Region 9 RSLs were evaluated. The 5 IRIS chemicals most frequently noted in HMIRS purchases were ethylbenzene, ethylene glycol, nickel, methanol and manganese. The 5 IRIS chemicals most frequently found at ERP sites at concentrations exceeding the RSLs were arsenic, naphthalene, benzo[a]pyrene, trichloroethylene, and tetrachloroethylene. The ranking of all of the IRIS chemicals due for updating is provided in the report.

Identification of Chemicals of Interest to the Department of Defense and the U.S. Air Force Among the U.S. Environmental Protection Agency's Integrated Risk Information System Chemicals that are due for Reassessment of Their Toxicity Values

INTRODUCTION

The U.S. Environmental Protection Agency (USEPA) Office of Research and Development informed the Office of the Secretary of Defense that it planned to review/update all of its older (>10 years) Integrated Risk Information System (IRIS) files. Such updates would include revisions to toxicity and cancer potency values warranted by scientific information developed since institution or last update of the prevailing values. Some of these chemicals may be of interest to the United States (U.S.) Department of Defense (DoD) and/or of particular interest to the U.S. Air Force because revisions in toxicity/carcinogenicity values may make the use of products more or less desirable and may affect the cost of remediation of environmental restoration sites contaminated with these chemicals. Readily available databases were used to assess and to rank the potential DoD stake in the IRIS chemicals due for reevaluation, hereafter called the IRIS chemicals of interest.

DATA SOURCES

A USEPA-derived table of IRIS chemicals due for reevaluation of their toxicity values was provided by the U.S. Air Force School of Aerospace Medicine (USAFSAM) Technical Services Division (OEHT). The table included 473 chemicals with Chemical Abstract Services Registry Numbers (CASRN) that are evaluated in this report (additional detail in Appendix A).

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Priority List of Hazardous Substances was used to provide an indication of the interest of the environmental regulatory agencies in the IRIS chemicals of interest. The CERCLA requires that the USEPA and the Agency for Toxic Substances and Disease Registry (ATSDR) prepare a list, in order of priority, of at least 100 hazardous substances that are most commonly found at facilities on the National Priorities List (NPL) and which are determined to pose the most substantial potential threat to human health due to their known or suspected toxicity to humans and the potential for human exposure to such substances (additional detail in Appendix A). This database provides a metric of the interest the environmental and health agencies may have in the IRIS chemicals of interest.

The Hazardous Material Information Resource System (HMIRS) was used to evaluate the potential interest of the supply side of the DoD in the IRIS chemicals of interest. The HMIRS is a DoD system developed and maintained by the Defense Logistics Agency (DLA) as a central repository for Material Safety Data Sheets for the United States government military services and civil agencies. The HMIRS provides these data for hazardous materials purchased by the federal government through the DoD and civil agencies (additional detail in Appendix A). Querying this database provided a metric of the number of products purchased by the DLA that contain the IRIS chemicals of interest.

The Environmental Restoration Program (ERP) Information Management System (ERPIMS) was used to evaluate the Air Force stake in the IRIS chemicals of interest. The ERPIMS is the Air Force system for validation and management of data from environmental projects at all Air Force installations. The data it contains include analytical chemistry samples, test results, and site and location descriptions. The ERPIMS was queried to obtain the number of ERP sites at which each of the IRIS chemicals of interest had been detected and to find the maximum concentration of each chemical in the soil and groundwater at those sites. Because many of the detected chemicals are naturally occurring, the maximum soil and groundwater concentrations were compared to the residential soil and tap water Regional Screening Levels (RSLs). The RSLs are concentrations of selected chemicals in environmental media that are anticipated to not result in adverse health effects based on relatively conservative exposure scenarios (USEPA Region 9, 2009). The results of this evaluation were used to provide a metric of interest to the Air Force ERP (additional detail in Appendix A).

SCORING THE IRIS CHEMICALS OF INTEREST FOR RELEVANCE TO THE DOD

The CASRN of the IRIS chemicals of interest were compared to those on the ATSDR NPL priority list, the HMIRS, and the ERPIMS. Of the 473 chemicals on the IRIS list, 133 of them are among the 275 chemicals on the 2007 CERCLA Priority List of Hazardous Substances (ATSDR, 2007), 386 are chemicals or ingredients of products purchased by the DLA, and 167 of them are found at Air Force ERP sites. Of the 167 found at Air Force ERP sites, 108 are found at concentrations exceeding residential soil and/or tap water RSLs (additional detail in Appendix A).

In order to use the information from the three databases (ATSDR, HMIRS, ERPIMS/RSL) to score the IRIS chemicals of interest, ATSDR chemical points were used, along with the number of Product Identity entries with which each chemical was associated in the HMIRS and the sum of the soil and groundwater ERP sites at which the concentrations of chemicals exceeded the residential and tap water RSLs, respectively. The ATSDR ranks the chemicals on its priority list using an equation based on the chemical's frequency of occurrence at NPL sites, its toxicity, and the potential for human exposure to the chemical (ATSDR, 2007). With this system, the maximum number of points assigned to a chemical is 1,800. The HMIRS associates the CASRN for the IRIS chemicals of interest with 151,413 Stock Numbers indicating that these products are the chemical or the chemical is a component of the product. The ERPIMS evaluation indicates that the IRIS chemicals of interest have been found at more than 1,000 of the 6,675 ERP soil and groundwater sites at concentrations exceeding the respective RSLs.

To combine the information in the three databases (ATSDR, HMIRS, ERPIMS/RSL) and use it to rank the IRIS chemicals of interest, the greatest number of points assigned by the ATSDR to a chemical (1672.58), the greatest number of Product Identity entries associated with a single chemical (10,696), and the greatest number of Air Force ERP soil and groundwater sites at which a single chemical exceeded the respective RSLs (1,641) were each set equal to an arbitrary score of 10,000. Points (ATSDR), numbers of Product Identity associations (HMIRS), and numbers of soil and groundwater site associations (ERPIMS/RSL) less than the maximum were set at their fractional value of the maximum.

The values for each chemical in the three databases were summed and the results (scores) are ordered in Table 1a. To retain the information on the standing of each chemical within its respective database, the rank of that chemical is also provided. For example, in Table 1a, ethylbenzene was given an HMIRS score of 10,000 because it was associated with the greatest number of Product Identity numbers (10,696) and, thus, has the HMIRS ranking of “1”. Ethylbenzene was the chemical with the 59th highest number of ATSDR points, while it ranked 7th in the number of ERP soil and groundwater sites in which it was found at concentrations greater than the RSLs. Chemicals with the same score were also given the same rank; Table 1a only displays those IRIS chemicals of interest (393) that were found in at least one of the three databases used in this evaluation. Table 1b provides the same information as Table 1a with the chemicals organized by chemical name to facilitate finding information on a specific chemical.

To better estimate DoD and Air Force interest in the IRIS chemicals of interest, the ATSDR values were eliminated from the ordering described above. The results using only the HMIRS and ERPIMS/RSL scores are in bold font in Table 2a. The results of the sorting in Table 1a are retained in Table 2a to facilitate consideration of the impact of the ATSDR score on the ordering of the chemicals. As in Table 1a, only those IRIS chemicals of interest found in at least one of the databases used in this evaluation are displayed. Table 2b provides the same information as Table 2a with the chemicals organized by chemical name to facilitate finding information on a specific chemical.

1. BACKGROUND

The U.S. Environmental Protection Agency (USEPA) Office of Research and Development informed the Office of the Secretary of Defense that it planned to review/update all of its older (>10 years) Integrated Risk Information System (IRIS) files. Such updates will include revisions to toxicity and cancer potency values warranted by scientific information developed since institution or last update of the prevailing values. Some of these chemicals may be of interest to the Department of Defense (DoD) and/or of particular interest to the Air Force because revisions in their toxicity/carcinogenicity values may make the use of products more or less desirable and may affect the cost of remediation of environmental restoration sites contaminated with these chemicals. Several readily available databases were used to assess the potential DoD stake in the IRIS chemicals due for reevaluation, hereafter called the IRIS chemicals of interest.

The Hazardous Material Information Resource System (HMIRS) was used to evaluate the DoD's stake in the IRIS chemicals of interest. HMIRS is a DoD system developed and maintained by the Defense Logistics Agency (DLA) as a central repository for Material Safety Data Sheets (MSDS) for the United States government military services and civil agencies. The HMIRS provides these data for hazardous materials purchased by the federal government through the DoD and civil agencies. The system is intended to assist federal government personnel who handle, store, transport, use, or dispose hazardous materials. Querying this database provided a metric of the number of products purchased by the DLA that contain the IRIS chemicals of interest.

The Environmental Restoration Program (ERP) Information Management System (ERPIMS) was used to evaluate the Air Force stake in the IRIS chemicals of interest. The ERPIMS is the Air Force system for validation and management of data from environmental projects at all Air Force installations. The data it contains include analytical chemistry samples, test results, and site and location descriptions. The previous (Phase-I) query of this database conducted in January 2009 provided a metric of the number of Air Force installations and ERP sites contaminated with IRIS chemicals of interest. Although this query provided information on the number of sites at which IRIS chemicals of interest were detected, it did not provide information on the concentrations of the chemicals. Thus, whether the chemicals were present at concentrations that could pose unacceptable risk remained unknown. Therefore, a second (Phase-II) query was conducted in September 2009 that provided the maximum concentration detected of each of the IRIS chemicals of interest in soil and groundwater samples from Air Force ERP sites. This information was used to identify those chemicals found at Air Force ERP sites at concentrations exceeding those developed as Regional Screening Levels (RSLs) by Region 9 of the USEPA (USEPA Region 9, 2009). The RSLs are concentrations of selected chemicals in environmental media that are anticipated to not result in adverse health effects based on relatively conservative exposure scenarios.

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Priority List of Hazardous Substances was used to provide an indication of the interest of the environmental agencies in the IRIS chemicals of interest. The CERCLA requires that USEPA and the Agency for Toxic Substances and Disease Registry (ATSDR) prepare a list, in order of priority, of at least 100 hazardous substances that are most commonly found at facilities on the

National Priority List (NPL) and which are determined to pose the most substantial potential threat to human health due to their known or suspected toxicity to humans and the potential for human exposure to such substances. This database provided a metric of the interest the environmental and health agencies may have in the IRIS chemicals of interest.

2. SOURCE DATA DETAILS

2.1. IRIS Chemical List

A USEPA-derived table of IRIS chemicals, for which toxicity values had not been reviewed for at least ten years, was provided by the U.S. Air Force School of Aerospace Medicine (USAFSAM) Technical Services Division (OEHT). The table received had 497 entries. Five of these entries did not have Chemical Abstract Services Registry Numbers (CASRN): 2,4-/2,6-dinitrotoluene mixture; refractory ceramic fibers; uranium, soluble salts; nickel, soluble salts; and nickel refinery dust. Of the remaining 492 chemicals, 18 duplicate entries were found, which reduced the number of chemicals to 474. In one case following the initial data queries of the ERPIMS and the HMIRS, an erroneous CASRN was identified (see below). The chemical was eliminated from the evaluation and the remaining 473 chemicals were used as described in the remainder of this report.

The table of IRIS chemicals with toxicity values that had not been reviewed for at least ten years provided by the USAFSAM/OEHT included hexachlorodibenzo-p-dioxin (HxCDD), CASRN 034465-46-8. Beginning a CASRN with “0” is not consistent with CASRN convention. Without the “0”, 34465-46-8 is the CASRN for hexachlorodibenzodioxin (USEPA, 2008)—a reasonable synonym for hexachlorodibenzo-p-dioxin, which appeared in the provided list. However, a search of the IRIS website (<http://cfpub.epa.gov/ncea/iris/index.cfm>) for “34465-46-8” did not yield results. A search of the same IRIS website for “Hexachlorodibenzo-p-dioxin” identified an IRIS web page for “Hexachlorodibenzo-p-dioxin (HxCDD), mixture of 1,2,3,6,7,8-HxCDD and 1,2,3,7,8,9-HxCDD (CASRN 57653-85-7 and 19408-74-3).” Both of these chemicals are included in the list of IRIS chemicals of interest. Therefore, CASRN 34465-46-8 was not included in the evaluations reported here.

2.2. ATSDR 2007 CERCLA Priority List of Hazardous Substances

The CERCLA Priority List of Hazardous Substances was retrieved from the ATSDR web site (<http://www.atsdr.cdc.gov/cercla/07list.html>). This list ranks chemicals commonly found at sites on the NPL, which are determined to pose the greatest potential threat to human health due to their known or suspected toxicity and potential for human exposure at the NPL sites. The most recently updated list (2007) was used in this evaluation.

2.3. HMIRS Data Query Results

The USAFSAM/OEHT conducted a query of the HMIRS in March 2009 based on the CASRNs of IRIS chemicals that had not been updated for at least ten years. The query—yielding 151,413 records—provided information on several parameters for each of the queried CASRNs in the HMIRS including associations with: Stock Number, Item Name, Product Identification, Document Group Number, and Load Date. However, the information on some of these

parameters was incomplete as indicated in Table A-1a. The numbers of unique entries for each of the parameters are also provided in Table A-1a.

TABLE A-1a. Number of Associations among Queried HMIRS Parameters and the Number of Unique Entries for Each Parameter

Parameter	Parameter (number of associations)					
	CASRN	Stock No.	Item Name	Product I.D.	Doc. Grp. No.	
CASRN	151,413	135,125	52,303	151,413	151,41	3
Stock No.		135,125	52,302	135,125	135,12	5
Item Name			52,303	52,303	52,203	
Product I.D.				151,413	151,413	
Doc. Grp. No.					151,413	
Unique Entries		66,127	2,301	86,068	108,063	

2.4. ERPIMS Data Query Results

The Phase-I query results requested from the Air Force Center for Engineering and the Environment of the ERPIMS based on the CASRN of IRIS chemicals that had not been updated for at least ten years were received 26 and 28 January 2009. The query was limited to samples taken since 1997 to provide an indication of chemicals and sites currently of interest to the Air Force and it yielded 1,467,232 records of the IRIS chemicals of interest while surveying 6,675 sites at 302 Air Force installations. All of the detections are associated with specific Air Force installations. However, of the detections, those of propylene glycol (57-55-6), o-dinitrobenzene (528-29-0), formic acid (64-18-6), allyl chloride (107-05-1), cyclohexanone (108-94-1), Simazine (122-34-9), isobutyl alcohol (78-83-1), and asbestos (1332-21-4) were not associated with specific sites.

The Phase-II query results of the ERPIMS provided information on the maximum concentration of each of the IRIS chemicals of interest for which there was an RSL. The results of this query were also limited to samples taken after 1997. These results were compared to the RSLs to identify those IRIS chemicals of interest present at sufficient concentrations in soil or groundwater to be of potential concern.

3. PHASE-I EVALUATION

3.1. IRIS Chemicals of Interest on the ATSDR CERCLA Priority List

The chemical CASRN on the CERCLA Priority List of Hazardous Substances were compared to those of the IRIS chemicals of interest. The ATSDR ranks the chemicals on its priority list using an equation based on the chemical's frequency of occurrence at NPL sites, its toxicity, and

the potential for human exposure to the chemical (ATSDR, 2007). With this system, the maximum number of points for a chemical is 1800. Of the 275 chemicals on the ATSDR list of priority chemicals, 133 of them are among the 473 IRIS chemicals of interest. Those 133 chemicals are identified in Table A-2a at Appendix A-2. Forty-two of the IRIS chemicals of interest have ATSDR scores >900 (half the maximum number of points); seven of these 42 are inorganic chemicals.

3.2. IRIS Chemicals of Interest in the HMIRS

The HMIRS was queried to determine which of the IRIS chemicals of interest are represented among the products purchased by the DoD; 151,413 records were received on 386 of the IRIS chemicals of interest. An evaluation of the number of times each of the IRIS chemicals of interest is associated with any of the HMIRS parameters is available in the tables of Appendix A-3.

Stock Number was one of the HMIRS parameters queried, which resulted in 135,125 records of a possible 151,413. Of the 135,125 Stock Numbers represented in this query, about half (66,127) were unique. In the HMIRS, the first four digits of the Stock Number indicate the product type (paint, lubricant, etc.) and the query yielded product types associated with the IRIS chemicals of interest. Appendix A-3 has tables in which the IRIS chemicals of interest are ranked according to the number of times they are associated with Stock Numbers (Appendix A-3, Table A-3a), unique Stock Numbers (Appendix A-3, Table A-3b) and Stock Numbers with unique first four digits (Appendix A-3, Table A-3c).

The 20 most frequently associated chemicals by rank using each of the Stock Number types described above is provided in Table A-1b. Finding 12 of the chemicals common to all of the Stock Number types indicates that many of the chemicals are ingredients in a wide range of products purchased by the DoD, because each group of Stock Numbers (135,125) with the same first unique four digits (302) represents on average 447 products.

The association of IRIS chemicals of interest with Item Name was another parameter provided by the HMIRS query; 52,303 Item Name entries were found associated with the IRIS chemicals of interest. This represents only about 35% of the possible records—too limited to have utility as an indicator of potential DoD interest in these chemicals. Although not evaluated further, the ranking of the number of Item Names and the number of unique Item Names associated with each IRIS chemical of interest are provided Appendix A-3, Tables A-3d and A-3e, respectively

The numbers of associations of each IRIS chemical of interest with individual Product Identities were also provided by the HMIRS query. Product Identities were provided for every record in the HMIRS query results. Thus, this parameter likely provides the best indication of DoD stake in the IRIS chemicals of interest. The ranking of the number of Product Identity entries associated with each IRIS chemical of interest is provided at Appendix A-3, Table A-3f. Ethylbenzene and ethylene glycol are each associated with more than 10,000 products purchased by the DoD and combined account for 13.8% of the records received in the HMIRS query. The ranking of the IRIS chemicals of interest by their association with unique Product Identities is also provided at Appendix A-3 in Table A-3g. This ranking, however, likely reduces the utility of the Product Identity as an indicator of DoD interest in the chemical because multiple entries of

a single Product Identity are represented by the single unique Product Identity used in the evaluation.

TABLE A-1b. Rank in Descending Order of the IRIS Chemicals of Interest Most Frequently Associated with HMIRS Stock Number Types

Rank	Stock Number	Unique Stock Number	Unique 1 st 4 Digits Stock No.
1	Ethylene glycol^a	Ethylene glycol	Nickel
2	Ethylbenzene	Nickel	Copper
3	Nickel	Manganese	Methanol
4	Methanol	Copper	Manganese
5	Manganese	Ethylbenzene	1,1,1-Trichloroethane
6	Copper	Methanol	Molybdenum
7	n-Butanol	n-Butanol	Ethylene glycol
8	Dichloromethane	Ethyl acetate	Cadmium
9	Ethyl acetate	Dichloromethane	Silver
10	Propylene glycol	Propylene glycol	Arsenic, inorganic
11	1,1,1-Trichloroethane	1,1,1-Trichloroethane	Dichloromethane
12	Polychlorinated biphenyls	Molybdenum	White phosphorus
13	Molybdenum	Polychlorinated biphenyls	Ethylbenzene
14	Cyclohexanone	Cyclohexanone	Ethyl acetate
15	Isobutyl alcohol	Hydrogen chloride	Propylene glycol
16	Silver	Silver	Antimony
17	Hydrogen chloride	Cadmium	Phosphoric acid
18	Hydroquinone Phosp	Phosphoric acid	1,1,2-Trichloro-1,2,2-trifluoroethane (CFC-113)
19	Phosphoric acid	Hydroquinone	Methylene diphenyl diisocyanate (monomeric MDI)
20	1,6-Hexamethylene diisocyanate	Propylene glycol monomethyl ether	n-Heptane

a. Bolded font indicates ranking among top 20 associations for all three Stock Number types.

The numbers of associations of each IRIS chemical of interest with individual Document Group Numbers were also provided by the HMIRS query. As with Product Identity, Document Group Numbers were provided for every record in the HMIRS query results. Because the number of associations of each IRIS chemical of interest with Document Group Numbers and the ranking of these associations (Appendix A-3, Table A-3h) is the same as for Product Identities (Appendix A-3, Table A-3f), they have the same utility for indicating the potential interest of each chemical to the DoD when all of the Document Group Numbers are used. However, the Document Group Numbers do not provide any product information. Although not evaluated further the ranking of IRIS chemicals of interest based on their association with unique Document Group Numbers is provided in Appendix A-3 (Table A-3i).

The Document Group Numbers begin with three different letters—B, C, and Z—which provide some insight into when the records were entered into the HMIRS (Table A-1c). Table A-1c also provides the number of associations of each of the parameters in the HMIRS query results with the types of Document Group Numbers. Of all of the Document Group Numbers, 85,093 (56.2%) begin with B and 65,141 (43.0%) begin with C. The remaining 1,179 (0.8%) begin with Z. The short calendar period (<8 months) during which the substantial number of B-prefixed Document Group Numbers were entered likely indicates the loading of a backlog of MSDSs into

the HMIRS because fewer C- and Z-prefixed Document Group Numbers were loaded during the more recent seven-year period. All load dates of the Z-prefixed Document Group Numbers fall within those of the C-prefixed numbers, thus, these two groups were combined for further evaluation.

TABLE A-1c. Record Load Dates and Number of IRIS Chemicals of Interest Associations with HMIRS Types of Document Group Numbers

	Document Group Number			
	Total	B Prefix	C Prefix	Z Prefix
Earliest Load Date	3/7/2002	3/7/2002	3/12/2002	6/17/2002
Latest Load Date	3/6/2009	10/29/2002	3/6/2009	3/5/2009
CASRN	151,41 3	85,093	65,141	1,179
Stock No.	135,12 5	85,068	49,161	896
Item Name	52,203	25,811	25,638	854
Product I.D	151,41 3	85,093	65,141	1,179
Doc. Grp. No.	151,41 3	85,093	65,141	1,179
Unique Entries	108,063	60,425	47,009	629

The 20 chemicals most frequently associated with the total, B-prefixed, and C&Z-prefixed Document Group Numbers are ranked in Table A-1d. Comparing the chemical rankings of the of B- and C&Z-prefixed Document Group Numbers to those of all Document Group Numbers provides information on how the more recent DoD purchases has influenced the rankings of the chemicals. Cumene, antimony, inorganic arsenic, n-heptane, and propylene glycol monomethyl ether are among the top 20 IRIS chemicals of interest when ranking is done on the more recently loaded HMIRS records, while they do not appear among the top ten chemicals when all Document Group Numbers are used in the ranking. The rankings of all chemicals within the B- and C&Z-prefixed Document Group Numbers are at tabs Appendix A-3, Tables A-3j and A-3k, respectively.

TABLE A-1d. Rank in Descending Order of the IRIS Chemicals of Interest Most Frequently Associated with HMIRS Categories of Document Group Numbers

Rank	All Document Group Numbers	B-Document Group Numbers	C&Z-Document Group Numbers
1	Ethylbenzene^a	Ethylene glycol	Ethylbenzene
2	Ethylene glycol	Nickel	Ethylene glycol
3	Nickel	Manganese	Methanol
4	Methanol	Copper	Nickel
5	Manganese	Methanol	n-Butanol
6	Copper	Ethylbenzene	Manganese
7	n-Butanol	n-Butanol	Copper
8	Ethyl acetate	Dichloromethane	Propylene glycol
9	Dichloromethane	1,1,1-Trichloroethane	Ethyl acetate
10	Propylene glycol	Ethyl acetate	Molybdenum
11	1,1,1-Trichloroethane	Polychlorinated biphenyls	Cyclohexanone
12	Molybdenum	Propylene glycol	Cumene
13	Cyclohexanone	Molybdenum	Hydrogen chloride
14	Polychlorinated biphenyls	Isobutyl alcohol	1,6-Hexamethylene diisocyanate
15	Hydrogen chloride	Cyclohexanone	antimony
16	Silver	Hydrogen chloride	Phosphoric acid
17	Phosphoric acid	Silver	Arsenic, inorganic
18	Isobutyl alcohol	Phosphoric acid	n-Heptane
19	Hydroquinone	Hydroquinone	Silver
20	1,6-Hexamethylene diisocyanate	1,6-Hexamethylene diisocyanate	Propylene glycol monomethyl ether

a. Bolded font indicates ranking among top 20 associations for all three categories of Document Group Numbers.

3.3. IRIS Chemicals of Interest in the ERPIMS

The ERPIMS was queried to determine which of the IRIS chemicals of interest are represented among the chemicals of interest to the Air Force ERP. The query based on the IRIS chemicals of interest resulted in 1,467,232 records.

The number of times each IRIS chemical of interest is associated with an Air Force installation or an Air Force ERP site in the ERPIMS was evaluated as well as how many times each chemical was detected. The rankings of the top 20 IRIS chemicals of interest based on the number of installations, the number of sites, or the number of samples in which they were found is shown in Table A-1e. The complete ranking of these associations, by installations, sites, and total detects, can be found at Appendix A-4, Tables A-4a, A-4b, and A-4c, respectively.

Fifteen of the chemicals in Table A-1e are among the top ranked 20 chemicals in installation, site, and total detection associations. This fact notwithstanding, the number of Air Force installations at which a chemical was detected is too coarse a metric by which to gauge the impact a change in IRIS toxicity values may have on the Air Force. There is little difference in the representation of chemicals between the rankings by site and by detections; eight inorganic and seven organic chemicals are common to the top 20 chemicals associated with both parameters. When considering the inorganic chemicals, two items should be kept in mind: (1) the detections may indicate the presence of naturally occurring inorganic chemicals, and (2) these analyses are

run as analytical suites. Thus, while sampling and analysis may be conducted to determine the nature and extent of an actual inorganic contaminant, detections of other analytes common to the analytical suite will also be recorded when they are present at naturally occurring concentrations.

TABLE A-1e. Rank in Descending Order of the IRIS Chemicals of Interest Most Frequently Associated with Air Force Installations, ERP Sites, or ERP Detections

Rank	Air Force Installations	ERP Sites	ERP Detections
1	Dichloromethane^a	Arsenic, inorganic	Trichloroethylene
2	Ethylbenzene	Manganese	cis-1,2-Dichloroethylene
3	Trichloroethylene	Nickel	Manganese
4	Naphthalene	Copper	Arsenic, inorganic
5	Arsenic, inorganic	Dichloromethane	Nickel
6	Manganese	Cadmium	Copper
7	Selenium and compounds	Trichloroethylene	Tetrachloroethylene
8	Cadmium	Selenium and compounds	Dichloromethane
9	Copper	Trichloroethylene	Ethylbenzene
10	Phenanthrene	Ethylbenzene	Trichloroethylene
11	cis-1,2-Dichloroethylene	Mercury, elemental	trans-1,2-Dichloroethylene
12	Nickel	Beryllium and compounds	Cadmium
13	Tetrachloroethylene	cis-1,2-Dichloroethylene	Beryllium and compounds
14	Mercury, elemental	Di(2-ethylhexyl)phthalate (DEHP)	Chlorobenzene
15	Cumene	Tetrachloroethylene	Selenium and compounds
16	Silver	Silver	1,1-dichloroethane
17	Di(2-ethylhexyl)phthalate (DEHP)	Antimony	Mercury, elemental
18	Fluoranthene	Fluoranthene	1,1,1,2-tetrachloroethane
19	Beryllium and compounds	Phenanthrene Cumene	ne
20	1,4-Dichlorobenzene	Pyrene	Fluoranthene

a. Bolded font indicates ranking among top 20 associations for all three categories of Document Group Numbers.

The rankings of the numbers of associations of each IRIS chemical of interest with soil, groundwater, soil gas, surface water, and sediment samples from Air Force ERP sites also are provided at Appendix A-4, Tables A-4d, A-4e, A-4f, A-4g, and A-4h, respectively. The top-ranked 20 chemicals for each of these environmental media are provided in Table A-1f. These ranking are not provided for comparison among the media because different chemicals would be expected in many of them. The rankings are instead provided as an indication of the chemicals that likely will be of greatest interest to the Air Force ERP by the media in which they are found. As indicated above, the detection of inorganic chemicals may not be the result of contamination but the occurrence of naturally occurring concentrations of these elements.

TABLE A-1f. Rank in Descending Order of the IRIS Chemicals of Interest Most Frequently Associated with Selected Sample Type in the ERPIMS

Rank	Soil Samples	Groundwater Samples	Soil-gas Samples	Surface-water Samples	Sediment Samples
1	Arsenic, inorganic	Trichloroethylene	Trichloroethylene	Manganese	Manganese
2	Copper cis-1,2-Dichlor	ethylene	Ethylbenzene	1,1,1,2-Tetrachloroethane	Arsenic, inorganic
3	Nickel Manganese		Tetrachloroethylene	Arsenic, inorganic	Copper
4	Manganese Tetrachloroethylene		cis-1,2-Dichloroethylene	Copper	Nickel
5	Beryllium and compounds	Trans-1,2-dichloroethylene	dichloromethane Trichloroethylene		Cadmium
6	Cadmium Ethylbenzene		1,1,2-Trichloro-1,2,2-trifluoroethane (CFC-113)	cis-1,2-Dichloroethylene	Beryllium and compounds
7	Mercury, elemental	Nickel	Dichlorodifluoromethane	Nickel	Mercury, elemental
8	Fluoranthene 1,1-Dichloroethane		Trichlorofluoromethane	Selenium and compounds	Fluoranthene
9	Pyrene Naphthalene		1,1-Dichloroethane	Antimony	Pyrene
10	Selenium and compounds	Arsenic, inorganic	Carbon disulfide	Cadmium	Chrysene
11	Chrysene Chlorobenzen	e	Chlorobenzene	Molybdenum	Benzo(b)fluoranthene
12	Benzo [a] pyrene	Dichloromethane	Styrene	Silver	Benzo [a] pyrene
13	Benzo(b)fluoranthene Cumene		n-Heptane	Mercury, elemental	Benzo(a)anthracene
14	Dichloromethane	1,1,1,2-Tetrachloroethane	Carbon tetrachloride	Dichloromethane	Phenanthrene
15	Benzo(a)anthracene 1,2-Dichloroethane		1,2-Dichlorobenzene	Tetrachloroethylene	Benzo(k)fluoranthene
16	Phenanthrene 1,4-Dichlorobenzene		1,2-dichloroethane	Beryllium and compounds	Selenium and compounds
17	Naphthalene Copper		trans-1,2-Dichloroethylene	Naphthalene Indeno[1,2,3-cd]pyrene	
18	Antimony 1,2-Dichlorobenzene		1,4-Dichlorobenzene	Chlorobenzene	Benzo[g,h,i]perylene
19	Indeno[1,2,3-cd]pyrene	Selenium and compounds	1,3-Dichlorobenzene	Di(2-ethylhexyl)phthalate (DEHP)	Silver
20	Benzo(k)fluoranthene Carbon tetrachloride		1,1,2,2-Tetrachloroethane	trans-1,2-Dichloroethylene	p,p'-Dichlorodiphenyltrichloroethane (DDT)

3.4. Agency Comparison, Phase-I

The chemical CASRNs of the IRIS chemicals of interest were compared to those on the ATSDR NPL priority list, the HMIRS, and the ERPIMS. Of the 473 chemicals on the IRIS list, 133 of them are among the 275 chemicals on the 2007 CERCLA Priority List of Hazardous Substances (ATSDR, 2007), 386 are chemicals or ingredients of products purchased by the DLA, and 167 of them are found at Air Force ERP sites.

The ATSDR ranks the chemicals on its priority list using an equation based on the chemical's frequency of occurrence at NPL sites, its toxicity, and the potential for human exposure to the chemical (ATSDR, 2007). With this system, the maximum number of points assigned to a chemical is 1800. The ranking of the IRIS chemicals of interest using the points assigned by the ATSDR is in bold font at Appendix A-5, Table A-5a. Inorganic arsenic has the greatest number of points (1672.58) among the IRIS chemicals of interest. Of the chemicals high on the ATSDR list (those with more than 900 points, or more than half the available points), nickel is most commonly associated with HMIRS Product Identity entries. Of the IRIS chemicals of interest with more than 900 ATSDR points, several are organic chemicals found at more than 10% of Air Force ERP sites: trichloroethylene (17.1%), tetrachloroethylene (12.7%), di(2-ethylhexyl)phthalate (DEHP) (12.7%), Benzo [a] pyrene (10.5%), p,p'-dichlorodiphenyltrichloroethane (DDT) 10.5%), and benzo(a)anthracene (10.4%). Of the IRIS chemicals of interest with more than 900 ATSDR points, five are inorganic chemicals found at more than 10% of the Air Force's ERP sites. However, these detections may, in some cases, represent naturally occurring background concentrations of the chemicals.

The IRIS chemicals of interest were ranked based on the number of Product Identity entries in the HMIRS, which indicates the chemical was the product or an ingredient of a product purchased by the DoD. The HMIRS Product Identity was selected as the indicator parameter because it and the Document Group Numbers were the most frequently provided parameters in the database (Table A-1a). The results of this ranking are in bold font at Appendix A-5, Table A-5b. Ethylbenzene is associated with 10,696 and ethylene glycol with 10,234 of the product entries in the HMIRS database, which combined account for almost 14% of the 151,413 records in the HMIRS associated with the IRIS chemicals of interest. Unfortunately, the data in the HMIRS do not provide information on the amounts of material represented by each of the records for the products. However, because ethylbenzene is the only BTEX (benzene, toluene, ethylbenzene, and xylene) compound among the IRIS chemicals of interest, it may be an indicator of fuel purchases by the DoD and ethylene glycol an indicator of antifreeze purchases.

To rank the IRIS chemicals of interest in the ERPIMS database for likely interest to the Air Force ERP, the number of sites at which the chemical was detected was selected as the ranking metric. The number of detects was rejected as an indicator because the amount of sampling conducted at any site is dependent on a number of factors that could not be evaluated sufficiently. In addition, for communication purposes, relating the chemicals to the number of ERP sites rather than ERP samples is expected to be more effective. The rank of the IRIS chemicals of interest based on the number of ERPIMS sites at which they occurred is in bold font at Appendix A-5, Table A-5c. Of the IRIS chemicals of interest, ten have been identified at more than 1,000 of the 6,675 ERP sites. Of the top ten, six are inorganic chemicals, which in

some of the cases may indicate the presence of naturally occurring chemicals rather than contamination. The four organic chemicals among the top ten are dichloromethane, trichloroethylene, naphthalene, and ethylbenzene. Unfortunately, information is not readily available on the frequency with which specific chemicals drive risk assessments or site cleanup requirements.

In order to combine the information in the three databases (ATSDR, HMIRS, ERPIMS) and use it to rank the IRIS chemicals of interest, the greatest number of points assigned by the ATSDR to a chemical (1672.58), the greatest number of Product Identity entries associated with a chemical (10,696), and the greatest number of Air Force ERP sites at which a chemical was detected (1,448) were each set equal to a score of 10,000. Points (ATSDR), numbers of Product Identity associations (HMIRS), and numbers of site associations (ERPIMS) less than the maximums were set at their fractional value of the maximum for their respective data sets. The values for each chemical were summed and the results (scores) were ranked. The results of this ranking are in bold font at Appendix A-5, Table A-5d. Of the nine chemicals with more than 15,000 of the possible score of 30,000, six of them are inorganic chemicals (nickel, arsenic, manganese, copper, cadmium, and mercury) and three are organic chemicals (ethylbenzene, dichloromethane, and trichloroethylene).

To better estimate DoD and Air Force interest in the IRIS chemicals of interest, the ATSDR values were eliminated from the ranking described above. The results of ranking using only the HMIRS and ERPIMS scores are in bold font at Appendix A-5, Table A-5e. Of the seven chemicals with more than 10,000 of the possible score of 20,000, five are inorganic and two are organic chemicals. Of the inorganic chemicals (manganese, nickel, copper, arsenic, and cadmium) with scores of more than 10,000, more than half of the scores are from the ERPIMS contribution. This high ERPIMS component may in some cases reflect the presence of naturally occurring chemicals rather than contamination. The two organic chemicals (ethylbenzene and dichloromethane) with combined scores of more than 10,000 are well represented in both the HMIRS and the ERPIMS, while ethylene glycol's score of 9,630 is due almost entirely by the HMIRS contribution.

4. PHASE-II EVALUATION

To further evaluate the potential for changes in the IRIS toxicity values to impact the ERP, the maximum concentrations of IRIS chemicals of interest found in soil and groundwater were compared to the USEPA Region 9 RSLs. The RSLs are the result of the recent harmonization of the USEPA Region 9 Preliminary Remediation Goals with similar risk-based screening levels used by Regions 3 and 6.

4.1. IRIS Chemicals of Interest in the ERPIMS at Concentrations Exceeding RSLs

The IRIS chemicals of interest are ordered by the number of Air Force ERP sites at which they were detected since 1997 at Appendix A-6, Table A-6a. The IRIS chemicals of interest are arranged by the number of soil sites plus groundwater sites with concentrations that exceed the residential soil and tap water RSLs at Appendix A-6, Table A-6a. Notice that for a few chemicals (arsenic, trichloroethylene, hydrazine/hydrazine sulfate, formic acid) the number of RSL

exceedances is greater than the number of sites at which the chemicals were detected, indicating that at some sites both soil and groundwater concentrations of the chemicals exceeded the RSLs.

One hundred and eight chemicals found at ERP sites exceed their RSLs in soil or groundwater samples from at least one site (Appendix A-6, Table A-6a) and for 29 of those chemicals there are more than 100 occurrences of the RSLs being exceeded at ERP soil and groundwater sites (Appendix A-6, Table A-6a and Table A-1g). The number of sites (1,641) with soil and/or groundwater arsenic concentrations exceeding the RSLs is twice the number of sites contaminated with naphthalene (818)—the second most frequently recorded chemical at concentrations exceeding its RSLs. Arsenic and cadmium are the only two inorganic IRIS chemicals of interest for which there are more than 100 occurrences of the RSLs being exceeded at ERP soil and groundwater sites.

TABLE A-1g. Chemicals for Which There are More Than 100 Occurrences of the RSLs Being Exceeded at ERP Soil and Groundwater Sites

Chemical	Number of ERP Sites with Concentrations Exceeding RSLs		
	Residential Soil	Tap Water	Residential Soil + Tap Water
Arsenic, inorganic	875	766	1641
Naphthalene 160		658	818
Benzo [a] pyrene	534	195	729
Trichloroethylene 46		585	631
Tetrachloroethylene 42		523	565
Benzo(b)fluoranthene 372		177	549
Ethylbenzene 111		432	543
Benzo(a)anthracene 365		164	529
Indeno[1,2,3-cd]pyrene 323		151	474
Dibenzo(a,h)anthracene 330		127	457
1,2-Dichloroethane 3		356	359
Di(2-ethylhexyl)phthalate (DEHP)	12	325	337
Dichloromethane 16		286	302
Bromodichloromethane 1		280	281
1,4-Dichlorobenzene 18		258	276
1,1,2-Trichloroethane 6		220	226
Benzo(k)fluoranthene 135		81	216
Carbon tetrachloride	3	212	215
Dibromochloromethane 2		206	208
cis-1,2-Dichloroethylene 1		196	197
Dieldrin 73		100	173
1,1-Dichloroethane 3		165	168
Mercury, elemental	27	133	160
1,2-Dichloropropane 2		130	132
1,1,2,2-Tetrachloroethane 6		121	127
Chrysene 49		68	117
Methyl tert-butyl ether	1	109	110
Cadmium 21		89	110
Heptachlor epoxide	22	82	104

4.2. Agency Comparison, Phase II

Of the 167 IRIS chemicals of interest found at Air Force ERP sites, 108 of them are found at concentrations that exceed RSLs in soil or groundwater (Appendix A-6, Table A-6b). To compare this revised list of chemicals to those on the ATSDR priority list and the HMIRS list, Table A-5c of Appendix A-5 was restructured and the ERPIMS data were replaced with the data from Appendix A-6 (Appendix A-7, Table A-7a). The ERPIMS data chemical parameter used for the comparison is the sum of the number of soil sites and groundwater sites in which the residential soil RSL and tap water RSL, respectively, are exceeded by the concentrations found in those media. As above, the maximum was set to a score of 10,000. Points (ATSDR), numbers of Product Identity associations (HMIRS), and numbers of site associations (ERPIMS) less than the maximums were set at their fractional value of the maximum. The values for each chemical were summed and the results (scores) were ranked. The results of this ranking are in bold font at the Appendix A-7, Table A-7b. Only two chemicals—arsenic and ethylbenzene—had scores greater than 15,000 of the possible score of 30,000.

Again, to better estimate DoD and Air Force interest in the IRIS chemicals of interest, the ATSDR values were eliminated from the ranking described above. The results of ranking using only the HMIRS and RSL-ERPIMS scores are in bold font at Appendix A-7, Table A-7c. With the HMIRS scores removed, ethylbenzene and arsenic were still the only two chemicals with combined scores greater than 10,000 of the possible score of 20,000. Interestingly, of the 20 chemicals with combined RSL-ERPIMS HMIRS scores greater than 3,000, seven of them are ranked in the top 20 solely because of their HMIRS score, indicating that the supply side of the DoD may have interest in the toxicity values of very different chemicals than the remediation programs.

APPENDIX A-4

Ranking of the USEPA IRIS Chemicals of Interest Using Selected Parameters From the U.S. Air Force's ERPIMS

- TABLE A-4a. Air Force Installations: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force Installations at Which They Were Detected
- TABLE A-4b. Air Force ERP Sites: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Sites at Which They Were Detected
- TABLE A-4c. Air Force ERP Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Samples in Which They Were Detected
- TABLE A-4d. Air Force ERP Soil Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Soil Samples in Which They Were Detected
- TABLE A-4e. Air Force ERP Groundwater Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Groundwater Samples in Which They Were Detected
- TABLE A-4f. Air Force ERP Soil-Gas Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Soil-Gas Samples in Which They Were Detected
- TABLE A-4g. Air Force ERP Surface-Water Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Surface-Water Samples in Which They Were Detected
- TABLE A-4h. Air Force ERP Surface-Water Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Surface-Water Samples in Which They Were Detected

This page intentionally blank.

TABLE A-4a. Air Force Installations: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force Installations at Which They Were Detected

CHEMICAL NAME	CASRN	Installations With Detects	Sites With Detects	Total Detects	Soil Detects	Groundwater Detects	Soil Gas Detects	Surface Water Detects	Sediment Detects
Dichloromethane 75-09-	2	102	1196	38619	11818	24092	1315	597	797
Trichloroethylene 79-01-	6	99	1141	126567	5624	115683	3219	1809	232
Ethylbenzene 100-41	-4	99	1059	37092	7192	27159	2368	259	114
Naphthalene 91-20-	3	98	1064	36497	10334	24821	107	551	684
Arsenic, inorganic	7440-38-2	97	1448	66457	35929	24614	0	2179	3735
Manganese 7439-96	-5	91	1292	79631	24671	45710	0	5511	3739
Selenium and compounds	7782-49-2	91	1097	29852	12918	14537	0	989	1408
Cadmium 7440-43	-9	89	1191	33531	21455	8527	0	878	2671

Parathion 56-38-	2								

TABLE A-4c. Air Force ERP Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Samples in Which They Were Detected (Cont.)

CHEMICAL NAME	CASRN	Installations With Detects	Sites With Detects	Total Detects	Soil Detects	Groundwater Detects	Soil Gas Detects	Surface Water Detects	Sediment Detects
Strychnine 57-24-	9								
beta-Propiolactone 57-57-	8								
2,6-Dimethylphenol	576-26-1								
Metalaxyl	57837-19-1								
Tridiphane 58138-08	-2								
Terbacil 5902-51	-2								
Calcium cyanide	592-01-8								
Vinyl bromide	593-60-2								
Fluridone 59756-60	-4								
1,1,2-Trichloropropane 598-77	-6								
d-Limonene 5989-27	-5								
Propiconazole 60207-90	-1								
Dimethoate 60-51-	5								
Furmecyclox	60568-05-0								
technical Hexachlorocyclohexane (t-HCH)	608-73-1								
1,2,4-Tribromobenzene	615-54-3								
Phenylmercuric acetate	62-38-4								
Acifluorfen, sodium	62476-59-9								
Methyl isocyanate	624-83-9								
Dichlorvos	62-73-7								
Sodium fluoroacetate	62-74-8								
Selenourea 630-10	-4								
Ammonium acetate	631-61-8								
Carbaryl 63-25-	2								
Nonabromodiphenyl ether	63936-56-1								
Diethyl sulfate	64-67-5								
Chlorsulfuron 64902-72	-3								
Avermectin B1	65195-55-3								
Thallium carbonate	6533-73-9								
Cyromazine	66215-27-8								
Flutolanil	66332-96-5								
Tralomethrin 66841-25	-6								

TABLE A-4c. Air Force ERP Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Samples in Which They Were Detected (*Cont.*)

CHEMICAL NAME	CASRN	Installations With Detects	Sites With Detects	Total Detects	Soil Detects	Groundwater Detects	Soil Gas Detects	Surface Water Detects	Sediment Detects
Amdro 67485-29	-4								
Prochloraz 67747-09	-5								
Cyhalothrin/karate 68085-85	-8								
N,N-Dimethylformamide 68-12-	2								
Baythroid 68359-37	-5								
Fluvalinate 69409-94	-5								
Haloxypop-methyl 69806-40	-2								
Hexachlorophene 70-30-	4								
Propanil 709-98	-8								
n-Butanol 71-36-	3								
Fomasafen 72178-02	-0								
Prometryn 7287-19	-6								
Phosmet 732-11	-6								
Sethoxydim 74051-80	-2								
Apollo 74115-24	-5								
Ally 74223-64	-6								
Radium 226,228	7440-14-4								
Thallium (I) sulfate	7446-18-6								
Selenium sulfide	7446-34-6								
Mercuric chloride	7487-94-7								
Hydrogen cyanide	74-90-8								
Propyleneimine 75-55-	8								
Propylene oxide	75-56-9								
Cacodylic acid	75-60-5								
Bromotrichloromethane 75-62-	7								
S-Ethyl dipropylthiocarbamate (EPTC)	759-94-4								
Trichloroacetic acid	76-03-9								
Hydrogen chloride	7647-01-0								
Glycidaldehyde	765-34-4								
Assure 76578-14	-8								
Phosphoric acid	7664-38-2								
Ammonia 7664-41	-7								

TABLE A-4c. Air Force ERP Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Samples in Which They Were Detected (*Cont.*)

CHEMICAL NAME	CASRN	Installations With Detects	Sites With Detects	Total Detects	Soil Detects	Groundwater Detects	Soil Gas Detects	Surface Water Detects	Sediment Detects
Paclobutrazol 76738-62	-0								
Glufosinate-ammonium	77182-82-2								
White phosphorus	7723-14-0								
Trichlorocyclopentadiene 77323-84	-3								
Lactofen 77501-63	-4								
Aluminum sulfamate	7773-06-0								
Dimethyl sulfate	77-78-1								
Fluorine, soluble fluoride	7782-41-4								
Selenious acid	7783-00-8								
Arsine	7784-42-1								
Thallium chloride	7791-12-0								
Tetraethyl lead	78-00-2								
Phosphine 7803-51	-2

Methylene Diphenyl Diisocyanate (polymeric MDI)	9016-87-9								
Chlorimuron-ethyl 90982-32	-4								
p-Chlorophenyl methyl sulfoxide	934-73-6								
Fonofos 944-22	-9								
4-(2-Methyl-4-chlorophenoxy) butyric acid	94-81-5								
Methidathion	950-37-8								
3,4-Dimethylphenol 95-65-	8								
Diphenamid 957-51	-7								
2,4-Diaminotoluene	95-80-7								
1,2,4,5-Tetrachlorobenzene 95-94-	3								
Tetrachlorovinphos 961-11	-5								
Methyl acrylate	96-33-3								
Ethylene thiourea	96-45-7								
Furfural 98-01-	1								
Benzotrichloride 98-07-	7								
p-Chlorophenyl methyl sulfone	98-57-7

2,6-Dimethylphenol	576-26-1								
Metalaxyl	57837-19-1								
Tridiphane 58138-08	-2								
Terbacil 5902-51	-2								
Calcium cyanide	592-01-8								
Vinyl bromide	593-60-2								
Fluridone 59756-60	-4								
1,1,2-Trichloropropane 598-77	-6								
d-Limonene 5989-27	-5								
Propiconazole 60207-90	-1								
Dimethoate 60-51-	5								
Furmecyclox	60568-05-0								
technical Hexachlorocyclohexane (t-HCH)	608-73-1								
1,2,4-Tribromobenzene	615-54-3								
Phenylmercuric acetate	62-38-4								
Acifluorfen, sodium	62476-59-9								
Methyl isocyanate	624-83-9								
Dichlorvos	62-73-7								
Sodium fluoroacetate	62-74-8								
Selenourea 630-10	-4								
Ammonium acetate	631-61-8								
Carbaryl 63-25-	2								
Nonabromodiphenyl ether	63936-56-1								
Diethyl sulfate	64-67-5								
Chlorsulfuron 64902-72	-3								
Avermectin B1	65195-55-3								
Thallium carbonate	6533-73-9								
Cyromazine	66215-27-8								
Flutolanil	66332-96-5								
Tralomethrin 66841-25	-6

ortho-Anisidine 90-04-	0								
Methylene Diphenyl Diisocyanate (polymeric MDI)	9016-87-9								
Chlorimuron-ethyl 90982-32	-4								

TABLE A-4h. Air Force ERP Surface-Water Samples: IRIS Chemicals of Interest Ranked by the Number (Bold Font) of Air Force ERP Surface-Water Samples in Which They Were Detected (*Cont.*)

CHEMICAL NAME	CASRN	Installations With Detects	Sites With Detects	Total Detects	Soil Detects	Groundwater Detects	Soil Gas Detects	Surface Water Detects	Sediment Detects
p-Chlorophenyl methyl sulfoxide	934-73-6								
Fonofos 944-22	-9								
4-(2-Methyl-4-chlorophenoxy) butyric acid	94-81-5								
Methidathion	950-37-8								
3,4-Dimethylphenol 95-65-	8								
Diphenamid 957-51	-7								
2,4-Diaminotoluene	95-80-7								
1,2,4,5-Tetrachlorobenzene 95-94-	3								
Tetrachlorovinphos 961-11	-5								
Methyl acrylate	96-33-3								
Ethylene thiourea	96-45-7								
Furfural 98-01-	1								
Benzotrithloride 98-07-	7								
p-Chlorophenyl methyl sulfone	98-57-7

APPENDIX A-5

Ranking of the USEPA IRIS Chemicals of Interest Using ATSDR, HMIRS, and ERPIMS (Number of Sites with Chemical Detections) Combined Scoring

- TABLE A-5a. ATSDR CERCLA Priority List: IRIS Chemicals of Interest Ranked by Their ATSDR CERCLA Priority List of Hazardous Chemical Points (Bold Font)
- TABLE A-5b. HMIRS Product Identities: IRIS Chemicals of Interest Ranked by Their Association with HMIRS Product Identities (Bold Font)
- TABLE A-5c. Air Force ERP Sites: IRIS Chemicals of Interest Ranked by the Number or Air Force ERP Sites at Which They Were Detected (Bold Font)
- TABLE A-5d. ATSDR, HMIRS, and ERPIMS: IRIS Chemicals of Interest Ranked by the Sum of Their ATSDR, HMIRS, and ERPIMS Scores (Bold Font) (see text Appendix A-1, Section 3.4 for details)
- TABLE A-5e. HMIRS and ERPIMS: IRIS Chemicals of Interest Ranked by the Sum of Their HMIRS and ERPIMS Scores (Bold Font) (see text Appendix A-1, Section 3.4 for details)

This page intentionally blank.

TABLE A-5a. ATSDR CERCLA Priority List: IRIS Chemicals of Interest Ranked by Their ATSDR CERCLA Priority List of Hazardous Chemical Points (Bold Font)

CHEMICAL NAME	CASRN	ATSDR Total Points	HMIRS Product Identity Entries	ERPIMS Sites With Detects
Maximum Possible Number		1,800.00	151,413	6,675
Arsenic, inorganic	7440-38-2	1,672.58	1,679	1,448
Mercury, elemental	7439-97-6	1,504.69	1,588	981
Polychlorinated biphenyls	1336-36-3	1,365.78	2,791	10
Cadmium 7440-43	-9	1,324.22	1,970	1,191
Benzo [a] pyrene	50-32-8	1,312.45	41	703
Benzo(b)fluoranthene 205-99	-2	1,266.55	25	698
p,p'-Dichlorodiphenyltrichloroethane (DDT)	50-29-3	1,193.36	114	372
Arochlor 1254	11097-69-1	1,182.63	70	162
Dibenzo(a,h)anthracene 53-70-	3	1,165.88	23	470
Trichloroethylene 79-01-	6	1,154.73	568	1,141
Dieldrin 60-57-	1	1,150.91	45	259
Chromium (VI)	18540-29-9	1,149.98	147	103
White phosphorus	7723-14-0	1,144.77	1,054	
p,p'-Dichlorodiphenyldichloro-ethylene 72-55-	9	1,132.49	37	54
Hexachlorobutadiene 87-68-	3	1,129.63		202
Creosote 8001-58	-9	1,124.32	32	
Aldrin 309-00	-2	1,117.22	44	181
p,p'-Dichlorodiphenyl dichloroethane	72-54-8	1,114.83	37	288
Benzidine 92-87-	5	1,114.24	23	4
Cyanide, free	57-12-5	1,099.48	48	215
Toxaphene 8001-35	-2	1,086.65	24	17
gamma-Hexachlorocyclohexane 58-89-	9	1,081.63	82	166
Tetrachloroethylene 127-18	-4	1,080.43	929	846
Heptachlor	76-44-8	1,072.67	54	184
beta-Hexachlorocyclohexane 319-85	-7	1,060.22	29	162
Disulfoton 298-04	-4	1,058.85	25	
Benzo(a)anthracene 56-55-	3	1,057.96	33	693
Endrin 72-20-	8	1,048.57	58	152
Beryllium and compounds	7440-41-7	1,046.12	379	948
delta-Hexachlorocyclohexane (delta-HCH)	319-86-8	1,038.27	30	177
1,2-Dibromo-3-chloropropane 96-12-	8	1,035.55	30	102
Pentachlorophenol 87-86-	5	1,028.01	110	116
Heptachlor epoxide	1024-57-3	1,027.12	45	209
Carbon tetrachloride	56-23-5	1,023.32	292	329
Arochlor 1016	12674-11-2	1,014.33	41	39
Dibutyl phthalate	84-74-2	1,007.49	1,132	420
Nickel 7440-02	-0	1,005.40	7,850	1,210
Endosulfan 115-29	-7	1,004.65	3	
Methoxychlor 72-43-	5	994.47	63	165
Benzo(k)fluoranthene 207-08	-9	981.26	24	583
Cacodylic acid	75-60-5	922.06	11	

TABLE A-5a. ATSDR CERCLA Priority List: IRIS Chemicals of Interest Ranked by Their ATSDR CERCLA Priority List of Hazardous Chemical Points (Bold Font) (Cont.)

CHEMICAL NAME	CASRN	ATSDR Total Points	HMIRS Product Identity Entries	ERPIMS Sites With Detects
Maximum Possible Number		1,800.00	151,413	6,675
Di(2-ethylhexyl)phthalate (DEHP)	117-81-7	919.02	1,311	851
Naphthalene 91-20-	3	896.67	1,635	1,064
Dichloromethane 75-09-	2	888.96	4,136	1,196
2,4,6-Trinitrotoluene 118-96	-7	883.59	51	28
Hydrazine/hydrazine sulfate	302-01-2	864.41	69	3
1,2-Dichloroethane 107-06	-2	863.99	440	546
2,4,6-Trichlorophenol 88-06-	2	863.71	35	49
2,4-Dinitrophenol 51-28-	5	860.45	34	46
Bis(chloroethyl)ether 111-44	-4	859.88	20	50
Asbestos 1332-21	-4	841.54	475	
Chlorine 7782-50	-5	840.37	241	1
Hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX)	121-82-4	840.28	102	43
Hexachlorobenzene 118-74	-1	838.34	88	51
2,4-Dinitrotoluene 121-14	-2	837.88	43	97
Ethion 563-12	-2	834.03	6	
1,1,1-Trichloroethane 71-55-	6	833.81	3,552	355
Uranium, natural	7440-61-1	833.41	59	8
Ethylbenzene 100-41	-4	832.13	10,696	1,059
Radium 226,228	7440-14-4	828.07		
1,3,5-Trinitrobenzene 99-35-	4	820.17	7	5
Chlorobenzene 108-90	-7	819.69	213	551
Fluoranthene 206-44	-0	812.40	32	804
N-Nitroso-di-N-propylamine 621-64	-7	811.05	23	70
alpha-Hexachlorocyclohexane (alpha-HCH)	319-84-6	809.56	31	155
Manganese 7439-96	-5	807.90	7,411	1,292
Coke oven emissions	8007-45-2	807.07	77	
Chlorpyrifos 2921-88	-2	804.93	166	
Copper 7440-50	-8	804.86	6,993	1,208
Hydrogen cyanide	74-90-8	803.08	32	
Chrysene 218-01	-9	802.10	34	733
Merphos oxide	78-48-8	797.88	2	
Parathion 56-38-	2	784.14	8	
1,1,2,2-Tetrachloroethane 79-34-	5	782.15	43	196
Selenium and compounds	7782-49-2	778.98	296	1,097
technical Hexachlorocyclohexane (t-HCH)	608-73-1	774.91	4	
Trifluralin 1582-09	-8	770.12	27	
Pentachlorobenzene 608-93	-5	753.58	4	1
Ammonia 7664-41	-7	745.55	1,453	
1,4-Dichlorobenzene 106-46	-7	737.32	246	516
1,1-Dichloroethane 75-34-	3	736.23	45	528
Acenaphthene 83-32-	9	731.25	37	513
1,1,2-Trichloroethane 79-00-	5	724.96	51	305
1,2-Diphenylhydrazine 122-66	-7	713.90	1	
4-Methylphenol 106-44	-5	707.83	39	189

TABLE A-5a. ATSDR CERCLA Priority List: IRIS Chemicals of Interest Ranked by Their ATSDR CERCLA Priority List of Hazardous Chemical Points (Bold Font) (Cont.)

CHEMICAL NAME	CASRN	ATSDR Total Points	HMIRS Product Identity Entries	ERPIMS Sites With Detects
Maximum Possible Number		1,800.00	151,413	6,675
1,2-Dichlorobenzene 95-50-	1	704.91	249 473	
trans-1,2-Dichloroethylene 156-60	-5	704.04	136 606	
Indeno[1,2,3-cd]pyrene 193-39	-5	703.30	23 604	
Carbon disulfide	75-15-0	702.55	40 539

Thiram 137-26	-8		93	
Sodium cyanide	143-33-9		90	
m-Phenylenediamine 108-45	-2		89	
Resmethrin 10453-86	-8		86	
Pentafluoroethane 354-33	-6		86	
Malathion 121-75	-5		80	
Amdro 67485-29	-4		77	
N,N-Dimethylaniline 121-69	-7		68	
Folpet 133-07	-3		68	
Ethylene thiourea	96-45-7		65	
Trichloroacetic acid	76-03-9		62	
Furfural 98-01-	1		61	
Triethylene glycol monobutyl ether	143-22-6		60	
Decabromodiphenyl ether (DBDPE)	1163-19-5		56	
Baythroid 68359-37	-5		50	
Simazine 122-34	-9		46	
Nitric Oxide	10102-43-9		43	
2-Nitropropane 79-46-	9		43	
Dimethylamine 124-40	-3		38	
Glyphosate 1071-83	-6		33	
Pendimethalin 40487-42	-1		32	
Diquat 85-00-	7		32	

TABLE A-5c. Air Force ERP Sites: IRIS Chemicals of Interest Ranked by the Number or Air Force ERP Sites at Which They Were Detected (Bold Font) (Cont.)

CHEMICAL NAME	CASRN	ATSDR Total Points	HMIRS Product Identity Entries	ERPIMS Sites With Detects
Maximum Possible Number		1,800.00	151,413	6,675
Acephate 30560-19	-1		30	
Silver cyanide	506-64-9		29	
Hexazinone 51235-04	-2		29	
Prometon 1610-18	-0		28	
Thallium nitrate	10102-45-1		27	
Selenium sulfide	7446-34-6		27	
Cypermethrin 52315-07	-8		26	
Hexachlorophene 70-30-	4		24	
Methomyl 16752-77	-5		22	
Maleic anhydride	108-31-6		21	
Copper cyanide	544-92-3		20	
Zinc phosphide	1314-84-7		19	
Alachlor 15972-60	-8		19	
Aluminum phosphide	20859-73-8		19	
Propargyl alcohol	107-19-7		17	
Tebuthiuron 34014-18	-1		17	
Benefin 1861-40	-1		16	
Metribuzin 21087-64	-9		16	
4-Aminopyridine 504-24	-5		16	
Bayleton 43121-43	-3		15	
1-Chlorobutane 109-69	-3		14	
3,3-Dimethylbenzidine 119-93	-7		14	
Propachlor 1918-16	-7		14	
Oxadiazon 19666-30	-9		14	
Pentabromodiphenyl ether	32534-81-9		14	
Iprodione 36734-19	-7		14	
Potassium silver cyanide	506-61-6		14	
Pydrin 51630-58	-1		14	
Oryzalin 19044-88	-3		13	
Ethyl carbamate	51-79-6		12	
2,6-Dimethylphenol 576-26	-1		12	
Biphenthrin 82657-04	-3		12	
Quinone 106-51	-4		11	
4,4'-Methylene bis(N,N'-dimethyl)aniline	101-61-1		10	
Captan 133-06	-2		10	
2-Chloroacetophenone 532-27	-4		10	
Metalaxyl 57837-19	-1		10	
Metolachlor 51218-45	-2		9	
Zinc cyanide	557-21-1		9	
Aluminum sulfamate	7773-06-0		9	
Warfarin 81-81-	2		9	
Chlorpropham 101-21	-3		8	
Endothall 145-73	-3		8	
Paraquat 1910-42	-5		8

TABLE A-7a. IRIS Chemicals of Interest Ranked by the Number of Air Force ERP Sites at Which They Were Detected at Concentrations Exceeding the RSLs (Bold Font) (*Cont.*)

CHEMICAL NAME	CASRN	ATSDR Total Points	HMIRS Product Identity Entries	ERPIMS Soil Sites + Groundwater Sites with Concentrations > RSLs*
Maximum Possible Number		1,800.00	151,413	N/A
ortho-Anisidine 90-04-	0			
p-Chlorophenyl methyl sulfoxide	934-73-6			
p-Chlorophenyl methyl sulfone	98-57-7			

* 0 = no RSL exceedances; blank = no RSL

TABLE A-7b. IRIS Chemicals of Interest Ranked by the Sum of Their ATSDR, HMIRS, and ERPIMS Scores (Bold Font) (see text Appendix A-1, Section 4.2 for details)
